5. I'm looking for some feedback on my ASP.NET MVC based CMS application architecture. Domain Model - depends on nothing but the System classes to define types. For now, mostly anemic. Repository Layer - abstracted data access, only called by the services layer. Services Layer - performs business logic on domain models.

.NET Application Architecture Guides
Using the code One of the best things about a good application architecture is the Separation of Concerns (SoC). One of the evident features of an ASP.NET MVC application is the ability to provide this separation of concerns out of the box. The Model will represent the business objects needed to implement the solution.
