Global service-based firms are often 'born global,' and these organizations have developed integrated global strategies based on industry relationships, in order to thrive in new environments. Focusing on these global strategies, this textbook explores the workings of modern service businesses, presenting theoretical management concepts alongside illustrative examples. Original case studies from a range of global sectors, including Starbucks and Facebook, as well as broader studies, such as healthcare in Japan, provide practical insights into the art of thriving as a global business. Written by a leading expert in the field, this multidisciplinary text is a vital read for all scholars and students wishing to view strategic relationships from the focal point of service industries.

Learn how to spot the "red flags" of fraud, how to comply with recent regulations including Sarbanes-Oxley, and how to develop and implement effective preventative measures. Emphasizing that it is much more cost effective to prevent fraud than to punish it, Corporate Fraud Handbook: Prevention and Detection, Second Edition gives you practical insight into fraud schemes used by employees, owners, managers, and executives to defraud their customers. This new edition also gives you access to all new statistics from the ACFE 2006 Report to the Nation as well as new cases.

Since World War I, the Natuurkundig Laboratorium has been a crucial center of industrial research for Philips, one of the world’s largest electronics companies. In this study, Marc J. de Vries demonstrates how the history of the laboratory can help us understand important changes in the production and uses of technology in the twentieth century. Breaking their study into three periods, each characterized by different research goals and approaches, the authors augment this general history with detailed case studies. The result will be of value to anyone studying the history and philosophy of technology.

The insertion in June 1997 of a Title on employment in the Treaty on European Union has accelerated the drafting of European policy in this field over the last few years. This European dynamic has had widespread impact on the themes and mechanisms that characterise national systems of industrial relations. On the one hand, employment is increasingly governed by rules negotiated between the social partners and, depending on the circumstances, the State. This phenomenon of joint labour market regulation is confirmed by a marked desire on the part of employers' associations and trade unions to integrate employment-related issues into their actions and negotiations. On the other hand, the incorporation of employment-related themes by employers’ associations and trade unions, usually in concertation with government policies, is related with greater coordination of bargaining and concertation mechanisms established at European level and within each Member State. Today, the various national realities appear to be directed to various degrees by these two general tendencies. These phenomena active in the field of employment bargaining must therefore be analysed on three counts: the first focuses on the development of the coordination mechanisms that structure these negotiations, and more specifically raises the issue of co-responsibility for the labour market; the second deals with the strict content of employment bargaining, and examines the question of negotiated flexibility of working conditions and employment; the third addresses the autonomy of collective bargaining in Europe. This analysis informs our research, which is in turn intimately linked to recent changes taking place in national systems of industrial relations.

This book covers research into the most important practices in product line organization. Contributors offer experience-based knowledge on the domain and application engineering, the modeling and management of variability, and the design and use of tools to support the management of product line-related knowledge.

'TQM: Text with Cases' is clearly written in a logical manner and points are supported by real life case studies. Professor Oakland demonstrates how a Total Quality Management strategy can be applied in all business activities to achieve world-class performance. This third edition features several major changes including new material on process modelling and management, quality management systems, people development, performance measurement, the Business Excellence Model, self-assessment, benchmarking, and the implementation of TQM. Case studies reflecting the latest developments in the area from leading exponents of TQM and Business Excellence have been included. These focus on organizations which have fully integrated the TQ approach into their business operations and delivered real benefits.
