By establishing the code, the creator is constructing a virtual space that has endless possibilities, but the code itself is an establishment of law and management towards this supposedly limitless system. The four factors of regulation that he describes, architecture, norms, law and market, are one of the strongest points to his argument (7).

The book. The book is an update to Lessig's book Code and Other Laws of Cyberspace, which was written in response and opposition to the notion that state governments could not regulate cyberspace and the Internet. The original argument that Lessig took issue with was weakened in the years following the book's release, as it became widely acknowledged that government regulation of the Internet was imminent, and so the author thought it necessary to update the work.

The law of cyberspace will be how cyberspace codes it, but we will have lost our role in setting that law. Lawrence Lessig is the Berkman professor for entrepreneurial legal studies at Harvard Law School. His most recent book, Code, and Other Laws of Cyberspace (Basic Books), has just been published (see <http://code-is-law.org>). The website of the Berkman Center for Internet and Society at the law school (see page 50) is <http://cyber.law.harvard.edu>.

In 2000 Lawrence Lessig of Stanford Law School published *Code and Other Laws of Cyberspace*, in which he argued: "that cyberspace changes not only the technology of copying but also the power of law to protect against illegal copying (125-127). He explores the notion that computer code may regulate conduct in much the same way that legal codes do.
