Community Acquired Pneumonia

Treatment Guidelines

This guideline sets out an antimicrobial prescribing strategy for community-acquired pneumonia. It aims to optimise antibiotic use and reduce antibiotic resistance. During the COVID-19 pandemic: for children and young people, follow the recommendations in this guideline. for adults, follow the recommendations in the COVID-19 rapid guidelines on managing pneumonia in the community and pneumonia in hospital.

developing within 48 hours of admission, or Hospital Acquired Pneumonia (HAP) - developing at least 48 hours after admission or within 7 days of discharge, although patients developing HAP <5 days after admission are likely to be infected by organisms similar to CAP and should be treated as CAP.

Management of Pneumonia - GGC Medicines

Initial treatment is with empirical antibiotics, following national/international guidelines and local epidemiology. In hospital, antibiotics should be administered within 4 hours of presentation. Sputum and blood samples should be sent for culture in people with moderate- or high-severity CAP, ideally before antibiotics are started, and legionella and pneumococcal urine antigen testing should be considered.
