Our prediction for global economies and global asset markets heading into the turbulent 2016-2017 period is not meant to be alarmist, or a "Dr. Doom" style forecast, but a realistic assessment of the facts around debt, demographics and disinflation, and then an extrapolation from those factors to individual economies and markets.

In fairness too, the author presents evidence that while we may not know exactly when the consequences of high debt, poor demographics, disinflation etc will manifest themselves, the history of economies and markets indicate these problems will become apparent in the near future.

Debt, Defaults, Disinflation & Demographics: How to ...

Debt deflation is a theory that recessions and depressions are due to the overall level of debt rising in real value because of deflation, causing people to default on their consumer loans and mortgages. Bank assets fall because of the defaults and because the value of their collateral falls, leading to a surge in bank insolvencies, a reduction in lending and by extension, a reduction in spending. The theory was developed by Irving Fisher following the Wall Street Crash of 1929 and the ensuing G

Debt, Defaults, Disinflation & Demographics: Debt, Defaults, Disinflation & Demographics: How to survive and prosper during the market meltdown of 2016-2017: Ferguson ...

A book that outlines the potential causes of the next global financial crisis, with debt, defaults, disinflation and demographics the major drivers for the next economic and equity downturn. The book is designed to be non technical and to be read by the "man or woman in the street".

This original and panoramic book proposes that the underlying forces of demography and globalisation will shortly reverse three multi-decade global trends -- it will raise inflation and interest rates, but lead to a pullback in inequality. "Whatever the future holds", the authors argue, "it will be nothing like the past". Deflationary headwinds over the last three decades have been primarily due to an enormous surge in the world's available labour supply, owing to very favourable demographic trends and the entry of China and Eastern Europe into the world's trading system. This book demonstrates how these demographic trends are on the point of reversing sharply, coinciding with a retreat from globalisation. The result? Ageing can be expected to raise inflation and interest rates, bringing a slew of problems for an over-indebted world economy, but is also anticipated to increase the share of labour, so that inequality falls. Covering many social and political factors, as well as those that are more purely macroeconomic, the authors address topics including ageing, dementia, inequality, populism, retirement and debt finance, among others. This book will be of interest and understandable to anyone with an interest on where the world's economy may be going.

This book is a collection of six studies on behaviour of financial and economic variables in emerging and Euro markets. It includes the latest empirical studies on 32 emerging economies. The studies cover examination of the behaviour of interest rates, banks' credit and default risks, sovereign bond markets, effectiveness of inflation targeting, and dynamics of external debt and growth. There is currently no single book that addresses all these issues. This is a valuable book for all those who are working on emerging markets.

The global economy has experienced four waves of rapid debt accumulation over the past 50 years. The first three debt waves ended with financial crises in many emerging market and developing economies. During the current wave, which started in 2010, the increase in debt in these economies has already been larger, faster, and broader-based than in the previous three waves. Current low interest rates mitigate some of the risks associated with high debt. However, emerging market and developing economies are also confronted by weak growth prospects, mounting vulnerabilities, and elevated global risks. A menu of policy options is available to reduce the likelihood that the current debt wave will end in crisis and, if crises do take place, will alleviate their impact.

Examines financial crises of the past and discusses similarities between these events and the current crisis, presenting and comparing historical patterns in bank failures, inflation, debt, currency, housing, employment, and government spending.

The biggest economic debate of our time centres around one fundamental question: is the decreased growth in today's world economy a short-term glitch -- or is it part of a permanent spiral? Without an answer, we have no hope of steering our international economies back towards the growth they need. After the global financial crisis, Larry Summers, Harvard professor and former director of the White House National Economic Council, reintroduced into economic debate the concept of 'secular stagnation', arguing persuasively that we're stuck in a trap of persistent low growth and depressed employment. The causes are various, from new technologies that have shifted the economy to zero-cost designed goods, to interest rates that can't go lower than zero. Without bold government intervention, there's no way out. And there's no time to lose.

The world economy is experiencing a very strong but uneven recovery, with many emerging market and developing economies facing obstacles to vaccination. The global outlook remains uncertain, with major risks around the path of the pandemic and the possibility of financial stress amid large debt loads. Policy makers face a difficult balancing act as they seek to nurture the recovery while safeguarding price stability and fiscal sustainability. A comprehensive set of policies will be required to promote a strong recovery that mitigates inequality and enhances environmental sustainability, ultimately putting economies on a path of green, resilient, and inclusive development. Prominent among the necessary policies are efforts to lower trade costs so that trade can once again become a robust engine of growth. This year marks the 30th anniversary of the Global Economic Prospects. The Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing economies, on a semiannual basis (in January and June). Each edition includes analytical pieces on topical policy challenges faced by these economies.

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

In this narrative history, David E. Lindsey gives the reader a ringside seat to a century of policies at the US Federal Reserve. Alternating between broad historical strokes and deep dives into the significance of monetary issues and developments, Lindsey offers a fascinating look into monetary policymaking from the Fed's inception in 1913 to today. Lindsey's three decades of service on the Federal Reserve Board staff allow him to combine the heft of scholarship with an insider's perspective on how the recent chairman's and current chairwoman's personalities and singular visions have shaped policy choices with far-reaching consequences. He critiques the performances of Chairman Ben Bernanke and Vice Chair Janet Yellen during the prelude, outbreak, and aftermath of the financial crisis of 2008, situating them in the context of the Fed's century-long history. He also quantitatively explores an alternative to the conventional New-Keynesian theory of inflation, replacing so-called "rational expectations" with the Fed's inflation objective. This unique volume is a piece of living history that has much to offer economists and monetary policy and finance professionals.
