# Read Online Gas Laws And Stoichiometry Study Guide

in chemical reactions; gas stoichiometry involves chemical reactions that produce gases. Stoichiometry is based on the law of conservation of mass, meaning that the mass of the reactants must be equal to the mass of the products.

## Read Online Gas Laws And Stoichiometry Study Guide

The stoichiometry of the reaction dictates that the number of moles  $\text{CaCO}_3$  decomposed equals the number of moles  $\text{CO}_2$  produced. Use the ideal-gas equation to convert moles of  $\text{CO}_2$  to a volume.  $V = \frac{nRT}{P} = \frac{(0.00150 \text{ mol})(0.08206 \text{ L atm mol}^{-1} \text{ K}^{-1})(273.15 \text{ K})}{1 \text{ atm}} = 0.0336 \text{ L}$  or 33.6 mL.
