Innovative Methodology for Multi-View Point Cloud ... In literature, various methods have been proposed for learning data representations from multiple views, such as multi-view clustering methods [3, 12, 12, 33, 37] and multi-view matrix factorization meth-ods [9, 16, 22]. „ese methods perform well on many applications such as clustering [12 ...

Abstract: The paper is concerned with the problem of multi-view three-dimensional (3D) point cloud registration. A novel global registration method is proposed to accurately register two series of scans into an object model underlying 3D imaging digitization by using the proposed oriented bounding box (OBB) regional area-based descriptor.

The proposed methodology for the analysis of multi-view biological datasets takes in input n matrices $M_i \in \mathbb{R}^{F_i \times P}$ for $i = 1, \dots, n$, where F_i is the number of features (genes, miRNAs, CNV, methylation, clinical information, etc.) and P is the number of patients and a vector cl of classes labels, and yields a multi-view partitioning $G = \{i = 1, \dots, k\} (G_i)$ of patients.

An innovative design activity has to start with the deployment of all the functionalities we want for the new product, the explicit and the implicit ones. It is during the first part of the design process. when we transform the functionalities in order to choose structures, before the detail design, that we can introduce innovation.

A robot 3D scanning strategy is nowadays employed to generate the complete set of point cloud of physical objects by using 3D robot multi-view scanning and data registration. The automated operation has to successively digitize view-dependent area-scanned point cloud from complex-shaped objects by simultaneous determination of the next best robot pose and multi-view point cloud registration.

An innovative methodology based on a combination of advanced clustering techniques and consistent conceptual interpretation of clusters is proposed to find more understandable patterns or clusters. The Interpreted Integrative Multiview Clustering (I2MC) combines the previously proposed Integrative Multiview Clustering (IMC) with a new interpretation methodology NCIMS.
