easily slip below this target temperature.

Cold Weather Masonry Construction

INTRODUCTION. Successful cold weather masonry construction requires knowledge of code requirements and planning capabilities, along with the capacity to be flexible and innovative. The code provides prescriptive requirements that must be met when the ambient air temperature is below 40oF. The requirements are grouped within temperature ranges, and while the provisions are prescriptive in nature, there is also considerable latitude given to the contractor to use.

Cold Weather Masonry Construction | International Masonry ...

When the ambient temperature falls below 40°F (4.4°C) during construction, or mean daily temperature is predicted to fall below 40°F (4.4°C) during the first 24 hours following construction of ungrouted masonry, or the minimum daily temperature is predicted to fall below 40°F (4.4°C) during the first 48 hours for grouted masonry, Specification for Masonry Structures (ref. 3) requires specific construction and protection procedures to be implemented as summarized in Tables 1a and 1b.
