Winner of the 2017 NAGC Curriculum Studies Award Space, Structure, and Story integrates Earth and space science with science fiction and nonfiction texts, poetry, and art. This unit, developed by Vanderbilt University's Programs for Talented Youth, is aligned to the Common Core State Standards and Next Generation Science Standards. Students explore advanced science and ELA content through the lens of structure's parts, purpose, and function. Mobius strips, the hero's journey, dystopian fiction, black holes, Einstein's relativity, stars, and moons are just a few of the captivating in-depth topics explored through accelerated content, engaging activities, and differentiated tasks. Ideal for gifted classrooms or gifted pull-out groups, the unit features poetry from Carl Sandburg, Henry Wadsworth Longfellow, and C. S. Lewis; art from M. C. Escher, Vincent Van Gogh, Claude Monet, and Salvador Dali; a novel study featuring A Wrinkle in Time by Madeleine L'Engle; short stories from Isaac Asimov and Ray Bradbury; speeches from President John F. Kennedy and President Barack Obama; and informational texts about gravity, orbits, and black holes. Grades 4-6

Multilingual students, multilingual students, and students learning English as an additional language constitute a substantial and growing demographic in the United States. But these groups of students tend to receive unequal access to and inadequate instruction in Science, Technology, Engineering, Arts, and Mathematics (STEAM), with their cultural and linguistic assets going largely unacknowledged and underutilized. The need for more information about quality STEAM education for culturally and linguistically diverse students is pressing. This book seeks to address this need, with chapters from asset-oriented researchers and practitioners whose work offers promising teaching and learning approaches in the STEAM subjects in K-16 education settings. Authors share innovative ways in which classroom teachers integrate disciplinary reading, writing, discussion, and language development with content knowledge development in STEAM subjects. Also shared are approaches for integrating indigenous epistemologies, culturally sustaining pedagogy, and students' linguistic resources and life experiences into classroom teaching. The value of quality STEAM education for all students is an equity issue, a civics issue, and an economic issue. Our technologically-driven, scientifically-oriented, innovative society should be led by diverse people with diverse ways of approaching and being in the world. This book aims to make quality STEAM education a reality for all students, taking into account the many perspectives, bodies of knowledge, and skills they bring from a range of cultural and linguistic backgrounds, with the ultimate goal of strengthening the fields that will drive our society towards the future. There are three primary audiences for this book: teachers (both in-service and pre-service teachers), teacher educators (both pre-service preparation and professional learning); and applied researchers. Whatever their current or evolving role, readers are encouraged to use this book and the inquiry questions provided at the end of each chapter as a launching point for their own important work in achieving equity in STEAM education.

Whether you are simply curious about our mysterious neighbor-the Moon-or a teacher looking for ways to teach concepts about the Moon without misconceptions, Everything Moon is the non-technical, comprehensive guide you are seeking. From theories on the origin of the Moon, to phases, tides, eclipses, geology, past, current, and future missions, to the Apollo Program, Everything Moon guides you through the science and history you need to understand the Moon and includes creative, engaging investigations to develop important concepts. Written with teachers and students in mind, Everything Moon is a book for anyone who has ever asked themselves questions about our view of the Moon: what causes the same face of the Moon to face Earth every day; is there really a dark side of the Moon; what causes eclipses, tides and phases? With clear explanations, images, activities, and examples, Everything Moon will not only answer your questions about the Moon, but will spark a lively interest in all things lunar.

Authored by Openstax College CC-BY An OER Edition by Textbook Equity Edition: 2012 This text is intended for one-year introductory courses requiring algebra and some trigonometry, but no calculus. College Physics is organized such that topics are introduced conceptually with a steady progression to precise definitions and analytical applications. The analytical aspect (problem solving) is tied back to the conceptual before moving on to another topic. Each introductory chapter, for example, opens with an engaging photograph relevant to the subject of the chapter and interesting applications that are easy for most students to visualize. For manageability the original text is available in three volumes. Full color PDF's are free at www.textbookequity.org

University Physics is designed for the two- or three-semester calculus-based physics course. The text has been developed to meet the scope and sequence of most university physics courses and provides a foundation for a career in mathematics, science, or engineering. The book provides an important opportunity for students to learn the core concepts of physics and understand how those concepts apply to their lives and to the world around them. Due to the comprehensive nature of the material, we are offering the book in three volumes for flexibility and efficiency. Coverage and Scope Our University Physics textbook adheres to the scope and sequence of most two- and three-semester physics courses nationwide. We have worked to make physics interesting and accessible to students while maintaining the mathematical rigor inherent in the subject. With this objective in mind, the content of this textbook has been developed and arranged to provide a logical progression from fundamental to more advanced concepts, building upon what students have already learned and emphasizing connections between topics and between theory and applications. The goal of each section is to enable students not just to recognize concepts, but to work with them in ways that will be useful in later courses and future careers. The organization and pedagogical features were developed and vetted with feedback from science educators dedicated to the project.
