Understanding Earth leads the way by fully integrating the study of climate science into the core introductory geology curriculum. Through strategic placement of the climate science chapters at the beginning of the geomorphology content, we offer a text that places our changing climate as a key force shaping the rest of our discussion on Earth's surficial processes.

This ebook is comprised of Hutton's 1788 paper 'Theory of the Earth', read before the Royal Society of Edinburgh, as well as Volumes 1 and 2 of his book of the same name. Although his books, filled with long quotes in French, make difficult reading, Hutton deserves to be better known as one of the makers of the modern view of the Earth.

The White Seed Brings Life to Worlds Three thousand years ago, the seeds arrived from Earth on hundreds of worlds. The developed worlds formed the Network, connected only by radio and laser. Since the time of the seeds, nothing but information has traveled between the stars. Now a starship, *The Child of Ambition*, is changing that. Her first mission: to explore the dark worlds, the ones that failed. Kali Hakoian, pilot-astronaut and war hero, thought landing on the super-Earth of Keto would be routine. The emptiest seed world—its global ocean matted with algae and crawling with hurricanes—hides the oldest human ruins. Her crew of scientists: a dreamer, a believer, and a retired assassin. Their hypothesis—self-termination of the seed base. But when an act of sabotage strands her in the path of a superstorm, she's forced to escape with the man she trusts the least. They may never find out what happened to the settlers—unless it happens to them. Can she trust her crew enough to find a way out of

One of Vox's Most Important Books of the Decade New York Times Editors' Choice 2017 Forbes Top 10 Best Environment, Climate, and Conservation Book of 2017 As new groundbreaking research suggests that climate change played a major role in the most extreme catastrophes in the planet's history, award-winning science journalist Peter Brannen takes us on a wild ride through the planet's five mass extinctions and, in the process, offers us a glimpse of our increasingly dangerous future Our world has ended five times: it has been broiled, frozen, poison-gassed, smothered, and pelted by asteroids. In *The Ends of the World*, Peter Brannen dives into deep time, exploring Earth's past dead ends, and in the process, offers us a glimpse of our possible future. Many scientists now believe that the climate shifts of the twenty-first century have analogs in these five extinctions. Using the visible clues these devastations have left behind in the fossil record, *The Ends of the World* takes us inside "scenes of the crime," from South Africa to the New York Palisades, to tell the story of each extinction. Brannen examines the fossil record—which is rife with creatures like dragonflies the size of sea gulls and guillotine-mouthed fish—and introduces us to the researchers on the front lines who, using the forensic tools of modern science, are piecing together what really happened at the crime scenes of the Earth's biggest whodunits. Part road trip, part history, and part cautionary tale, *The Ends of the World* takes us on a tour of the ways that our planet has clawed itself back from the grave, and casts our future in a completely new light.

The Fifth Edition of this bestselling textbook features stunning art, the most up-to-date science, and a wealth of online learning tools, all developed under the critical eyes of Stephen Marshak. PHYSICAL GEOLOGY: EXPLORING THE EARTH, Sixth Edition, doesn't just explain physical geology and its processes; it places that knowledge within the context of human experience by consistently emphasizing relevance, resources, and the environment. With this edition, the authors seek to answer two central questions, How does the planet work? and Why is this important to know? By discussing the unifying theory of plate tectonics in detail early in the text, the authors are able to link diverse material by this common thread, providing a global perspective of Earth and allowing students to recognize seemingly unrelated geologic phenomena as a continuum of interrelated events within a complete planetary system. In addition to providing students with an understanding of geology and its processes, the authors consistently demonstrate how geology relates to the human experience. By asking the question What would you do? throughout the text, students are encouraged to explore their reactions to particular situations. New Geology in Your Life sections address relevant student concerns, particularly in the areas of environment and energy. And a new penultimate chapter on Resources and the Fate of the Earth ties together many of the concepts of particular interest to students. This edition is fully integrated with the online student tutorial system Physical GeologyNow. Physical GeologyNow uses a series of chapter-specific diagnostic tests to build a personalized learning plan for each student, allowing students to focus their study time on specific areas of weaknesses. Each personalized learning plan directs students to specific chapter sections and concept-driven multimedia tutorials designed to augment their understanding.
